

## Disclaimer

The following report(s) provides findings from an FDA-initiated query using Sentinel. While Sentinel queries may be undertaken to assess potential medical product safety risks, they may also be initiated for various other reasons. Some examples include determining a rate or count of an identified health outcome of interest, examining medical product use, exploring the feasibility of future, more detailed analyses within Sentinel, and seeking to better understand Sentinel capabilities.

Data obtained through Sentinel are intended to complement other types of evidence such as preclinical studies, clinical trials, postmarket studies, and adverse event reports, all of which are used by FDA to inform regulatory decisions regarding medical product safety. The information contained in this report is provided as part of FDA's commitment to place knowledge acquired from Sentinel in the public domain as soon as possible. Any public health actions taken by FDA regarding products involved in Sentinel queries will continue to be communicated through existing channels.

FDA wants to emphasize that the fact that FDA has initiated a query involving a medical product and is reporting findings related to that query does not mean that FDA is suggesting health care practitioners should change their prescribing practices for the medical product or that patients taking the medical product should stop using it. Patients who have questions about the use of an identified medical product should contact their health care practitioners.

The following report contains a description of the request, request specifications, and results from the modular program run(s).

### Overview for Request: cder\_mpl1r\_wp122, Report 2 of 2

**Request ID:** cder\_mpl1r\_wp122\_nsdv\_v01

**Request Description:** The goal of this query was to characterize treatment duration of higher dosage strength opioid analgesics in the Sentinel Distributed Database (SDD). This is report 2 of 2. Report 1 contains characterizations of demographics of higher dosage strength opioid analgesic users in the SDD.

**Sentinel Modular Program Tool Used:** Cohort Identification and Descriptive Analysis (CIDA) tool, version 6.0.0

**Data Source:** Data from January 1, 2012 to June 30, 2018 from 17 Data Partners contributing to the SDD were included in this report. This request was distributed on November 12, 2018. See Appendix A for a list of dates of available data for each Data Partner.

**Study Design:** The request was designed to calculate summary statistics on length of treatment episodes of higher dosage strength opioid analgesics. Treatment length results were stratified by sex and age group.

**Exposure of Interest:** The exposures of interest were: 1) higher dosage strength oral and transmucosal opioid analgesics; 2) lower dosage strength oral and transmucosal opioid analgesics; 3) all oral and transmucosal opioid analgesics; and 4) transdermal opioid analgesics (fentanyl and buprenorphine). These exposures were defined using National Drug Codes (NDCs) and Healthcare Common Procedure Coding System (HCPCS) procedure codes. Please see Appendices B and C for generic and brand drug names used to define the exposure groups.

For evaluation of treatment length, exposure episodes were defined using days supplied to create a continuous treatment sequence. Gaps between dispensings that were 50% or less of the previous dispensing's days supply were bridged into a continuous treatment episode. Stockpiling of overlapping dispensings of the same generic name and form was applied, with a maximum adjustment of 25% overlap allowed. For same day dispensings of the same generic name and form, the maximum days supplied and amount supplied was used. Only dispensings with a range of 1-141 days supply and 1-2,280 amount supplied were allowed. Dispensings described by a procedure code were assigned a day supply of one.

**Cohort Eligibility Criteria:** Members included in the cohort were required to be continuously enrolled in health plans with medical and drug coverage for at least at least 183 days prior to and 30 days following the index exposure dispensing, during which gaps in enrollment coverage of up to 45 days were allowed. Exposure during all following enrollment episodes was assessed following the index dispensing. To assess incidence relative to the index, patients were excluded if they had a dispensing of the exposure group of interest in the 183 days preceding their index dispensing. All valid episodes during the query period were included, starting from the first incident dispensing. Treatment episodes were included until the first occurrence of any of the following: 1) disenrollment; 2) death; 3) Data Partner end date; 4) end of exposure episode; or 5) the end of the query period. The following age groups were included in the cohort: 0-17, 18-29, 30-49, 50-64, and 65+ years.

**Baseline Characteristics:** The presence of the following conditions was assessed in the period 183 days before through 30 days after the index date: mental health, substance abuse, abdominal pain, arthritis & nontraumatic joint conditions, back pain & back conditions, cancer, headache including migraine, other nervous system conditions, sickle cell anemia, sprains/strains & contusions, trauma/injury & fracture/burns. A member could have evidence of more than one condition in this evaluation period. Additionally, a combined comorbidity score<sup>1</sup> for the cohort was assessed in same evaluation period. These baseline characteristics were defined with the International Classification of Diseases, Ninth Revision, Clinical Modification (ICD-9-CM), International Classification of Disease, Tenth Edition, Clinical Modification/Procedure Coding System (ICD-10-CM/PCS), Healthcare Common Procedure Coding System (HCPCS) and Current Procedural Terminology (CPT) diagnosis and procedure codes. Please see Appendix D for specific codes used in this request.

**Please see Appendices E and F for the specifications of parameters used in the analyses for this request.**

**Limitations:** Algorithms used to define exposure groups are imperfect; thus, it is possible that there may be misclassification. Therefore, data should be interpreted with this limitation in mind.

**Notes:** Please contact the Sentinel Operations Center ([info@sentinelssystem.org](mailto:info@sentinelssystem.org)) for questions and to provide comments/suggestions for future enhancements to this document.

**Glossary of Terms for Analyses Using  
Cohort Identification and Descriptive Analysis (CIDA) Tool\***

**Amount Supplied** - number of units (pills, tablets, vials) dispensed. Net amount per NDC per dispensing.

**Blackout Period** - number of days at the beginning of a treatment episode that events are to be ignored. If an event occurs during the blackout period, the episode is excluded.

**Care Setting** - type of medical encounter or facility where the exposure, event, or condition code was recorded. Possible care settings include: Inpatient Hospital Stay (IP), Non-Acute Institutional Stay (IS), Emergency Department (ED), Ambulatory Visit (AV), and Other Ambulatory Visit (OA). For laboratory results, possible care settings include: Emergency Department (E), Home (H), Inpatient (I), Outpatient (O), or Unknown or Missing (U). The Care Setting, along with the Principal Diagnosis Indicator, forms the Care Setting/PDX parameter.

**Ambulatory Visit (AV)** - includes visits at outpatient clinics, same-day surgeries, urgent care visits, and other same-day ambulatory hospital encounters, but excludes emergency department encounters.

**Emergency Department (ED)** - includes ED encounters that become inpatient stays (in which case inpatient stays would be a separate encounter). Excludes urgent care visits.

**Inpatient Hospital Stay (IP)** - includes all inpatient stays, same-day hospital discharges, hospital transfers, and acute hospital care where the discharge is after the admission date.

**Non-Acute Institutional Stay (IS)** - includes hospice, skilled nursing facility (SNF), rehab center, nursing home, residential, overnight non-hospital dialysis and other non-hospital stays.

**Other Ambulatory Visit (OA)** - includes other non overnight AV encounters such as hospice visits, home health visits, skilled nursing facility visits, other non-hospital visits, as well as telemedicine, telephone and email consultations.

**Cohort Definition (drug/exposure)** - indicates how the cohort will be defined: 01: Cohort includes only the first valid treatment episode during the query period; 02: Cohort includes all valid treatment episodes during the query period; 03: Cohort includes all valid treatment episodes during the query period until an event occurs.

**Days Supplied** - number of days supplied for all dispensings in qualifying treatment episodes.

**Eligible Members** - number of members eligible for an incident treatment episode (defined by the drug/exposure and event washout periods) with drug and medical coverage during the query period.

**Enrollment Gap** - number of days allowed between two consecutive enrollment periods without breaking a "continuously enrolled" sequence.

**Episodes** - treatment episodes; length of episode is determined by days supplied in one dispensing or consecutive dispensings bridged by the episode gap.

**Episode Gap** - number of days allowed between two (or more) consecutive exposures (dispensings/procedures) to be considered the same treatment episode.

**Event Deduplication** - specifies how events are counted by the MP algorithm: 0: Counts all occurrences of an HOI during an exposure episode; 1: de-duplicates occurrences of the same HOI code and code type on the same day; 2: de-duplicates occurrences of the same HOI group on the same day (e.g., de-duplicates at the group level).

**Exposure Episode Length** - number of days after exposure initiation that is considered "exposed time."

**Exposure Extension Period** - number of days post treatment period in which the outcomes/events are counted for a treatment episode. Extensions days are added after any episode gaps have been bridged.

**Lookback Period** - number of days wherein a member is required to have evidence of pre-existing condition (diagnosis/procedure/drug dispensing).

**Maximum Episode Duration** - truncates exposure episodes after a requester-specified number of exposed days. Applied after any gaps are bridged and extension days added to the length of the exposure episode.

**Member-Years** - sum of all days of enrollment with medical and drug coverage in the query period preceded by an exposure washout period all divided by 365.25.

**Minimum Days Supplied** - specifies a minimum number of days in length of the days supplied for the episode to be considered.

**Minimum Episode Duration** - specifies a minimum number of days in length of the episode for it to be considered. Applied after any gaps are bridged and extension days added to the length of the exposure episode.

**Monitoring Period** - used to define time periods of interest for both sequential analysis and simple cohort characterization requests.

**Principal Diagnosis (PDX)** - diagnosis or condition established to be chiefly responsible for admission of the patient to the hospital. 'P' = principal diagnosis, 'S' = secondary diagnosis, 'X' = unspecified diagnosis, '.' = blank. Along with the Care Setting values, forms the Caresetting/PDX parameter.

**Query Period** - period in which the modular program looks for exposures and outcomes of interest.

**Treatment Episode Truncation Indicator** - indicates whether the exposure episode will be truncated at the occurrence of a requester-specified code.

**Washout Period (drug/exposure)** - number of days a user is required to have no evidence of prior exposure (drug dispensing/procedure) and continuous drug and medical coverage prior to an incident treatment episode.

**Washout Period (event/outcome)** - number of days a user is required to have no evidence of a prior event (procedure/diagnosis) and continuous drug and medical coverage prior to an incident treatment episode.

**Years at Risk** - number of days supplied plus any episode gaps and exposure extension periods all divided by 365.25.

<sup>1</sup>All metrics are based on total number of episodes per group, except for sex which is based on total number of unique patients.

<sup>2</sup>Aggregated results are not nationally representative when stratified by age. Further, the proportion of older adults included in this analysis varies by year. Please refer to Sentinel's Snapshot of Database Statistics (<https://www.sentinelinitiative.org/sentinel/data/snapshot-database-statistics>) for further details.

<sup>3</sup>The end of available data varies by Data Partner, with staggered end dates from May 2015 to June 2018 in this report. Please see Appendix A for further details.

<sup>4</sup>Evaluation period in the 183 days prior to the index exposure dispensing through 30 days after the dispensing; a patient could have more than one indication.
